SUMMARY

As a final-year Bachelor of Technology student specializing in Computer Science, I have prospered a robust skill set in software development. I've completed multiple projects utilizing technologies such as MERN stack, including an e-commerce application and a blood bank management system. I am passionate about problem-solving and continuously improve my technical skills through hands-on experience and extracurricular involvement.

EXPERIENCE

MERN Stack Developer Intern

Gamavis Softech LLP 🔗   📅 Feb 2024 - Aug 2024

Company focused on software development and technology solutions.

• Developed a web application enabling users to dynamically add and customize form inputs, supporting more than **30 unique input types**.

• Implemented functionality for users to add an unlimited number of inputs, with up to **80% customizable options** such as labels, placeholder text, and styles.

• Achieved **40% user engagement** or adoption rate within 1 month by offering extensive customization options for form creation.

COURSE WORK

Data Structures & Algorithms   Web Development

Software Engineering   Object Oriented Programming

Computer Networks   Database Management System

PROJECTS

Goyals: Simplifying Online Shopping

📅 Aug 2024 - Dec 2024
🔗 https://goyals.vercel.app/

Online Ecommerce Application built with MERN stack.

• Designed a MERN stack e-commerce site with 100+ products, featuring user authentication, a dynamic cart, wishlist, order management, and product filtering, improving browsing speed by 20%.

• Built an admin panel to manage 200+ products, 10+ blogs, and 5+ categories, with real-time analytics for orders and revenue, reducing manual effort by 30%.

• Integrated **Razorpay** for payments, achieving a 95% success rate, and implemented SEO, boosting organic traffic by 40%.

• Used **Redux** for state management, enhancing performance and improving user experience by 25% with faster navigation and optimized loading.

Blood Bank Application

📅 Mar 2023 - Jun 2023
🔗 https://github.com/kartikgoyal89/blood-bank

A Blood Bank application providing roles for donors, hospitals, and admins.

• Developed a MERN Stack Blood Bank application supporting **3 distinct user roles**: donors, hospitals, and admin, with a secure role-based access control system.

• Designed a user-friendly interface that reduced user onboarding time by **25%,** enhancing donor participation.

• Implemented Redux for state management, improving data consistency and reducing app loading time by **30%.**

EXTRA CURRICULAR

⭐ **Awaaz (Member)**
Contributed to college event management society as a part of management team. Organized many Cultural fests in College.

⭐ **GFG ADGITM Chapter (Member)**
Engaged as a vital member of GeeksforGeeks society's tech team in college, contributing technical expertise .
